

Transmission line  
construction  
is coming to your  
neighborhood.

Important schedule  
information for you.

Dear Neighbor,

As part of our commitment to provide safe, reliable electricity to your communities, Central Maine Power will begin its work to upgrade the 34.5kV transmission line near you beginning this fall. The 22-mile line travels from Augusta East Substation off Route 3 through parts of Augusta, Vassalboro, and Winslow to the Winslow Substation on Benton Avenue.

Here is the upcoming schedule beginning in Augusta:

- **September:** Environmental Permitting teams will be placing flagged stakes in the corridor. Please do not remove them. Thank you!
- **October:** Crews will be laying ground mats that are used to protect the environment from construction vehicle use in areas within the corridor.
- **November:** Vegetation and tree clearing will begin.

**Please know that we are committed to:**

- Completing our work in a safe and efficient manner
- Working to keep any inconvenience to a minimum

If you have concerns regarding the planned construction project, please contact our Project Outreach Department at **888.267.0831** or via email at **[outreach@cmpco.com](mailto:outreach@cmpco.com)**.
